

## Neighborhood Scavenger Hunt

Take a short walk around your yard or neighborhood (with permission!), and keep an eye/ear out to see and listen to the organisms around you. What organisms do you see or hear? What physical and behavioral adaptations do you notice? What does it make you wonder? Does it remind you of anything? Is this organism a predator or prey? How can you tell?

Fill your answers in the chart below!

	Type Of Organism	Physical Adaptations	Behavioral Adaptations	Wonder/Remind?	Predator Or Prey?
Example	Squirrel	-Big tail -Strong sense of smell (b/c it's sniffing) -Whiskers -Claws -Strong legs	-Hibernating - Hiding nuts - Fight predators in groups	I wonder how they remember where they bury their nuts!	Prey
